CSE | Security | Space Tech

I'm passionate about integrating cutting-edge technology with space innovation, leveraging my expertise across software engineering, cybersecurity, and research to create scalable, secure, and intelligent systems.

- **Full-Stack Development (MERN, TypeScript)** – Built community-driven platforms integrating learning, networking, and commerce for the space ecosystem.
- **SIH 2023 Grand Finalist:** Developed a J&K tourism platform that digitized local specialty vendors, boosting regional economy and cultural engagement.
- **Salesforce Development** – Developed reusable LWC components and optimized Apex logic for enterprise-grade applications, enhancing system reusability and scalability.
- **Cybersecurity & Recognition**: Honored with the NASA Vulnerability Disclosure Program (VDP) Award (Oct 2024) and the NASA Kennedy Space Center (KSC) Group Achievement Award, strengthening my expertise in system-level engineering and secure collaborative execution.
- **Space Systems Programming** – Trained in HAL/S programming for satellite control and mission-critical operations under NASA guidance.
- **Leadership & Innovation** Founder & President of ISA (Interstellar SpaceTech Astronomy), leading a global initiative to advance space education, research, and collaboration through technology-driven solutions.
- **Cloud & AI Skills –** Certified in AWS Cloud Foundations and Microsoft Azure AI Fundamentals, applying cloud technologies to next-gen space applications
- **Research & Publications –** Published an IEEE-format research paper: *"Implementation of AI in Integration of Small Satellites with Autonomous Vehicles"***.**
